ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in Member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in Member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original Member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became Members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996) and the Republic of Korea (12th December 1996). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

En vertu de l'article 1^{er} de la Convention signée le 14 décembre 1960, à Paris, et entrée en vigueur le 30 septembre 1961, l'Organisation de Coopération et de Développement Économiques (OCDE) a pour objectif de promouvoir des politiques visant :

- à réaliser la plus forte expansion de l'économie et de l'emploi et une progression du niveau de vie dans les pays Membres, tout en maintenant la stabilité financière, et à contribuer ainsi au développement de l'économie mondiale;
- à contribuer à une saine expansion économique dans les pays Membres, ainsi que les pays non membres, en voie de développement économique;
- à contribuer à l'expansion du commerce mondial sur une base multilatérale et non discriminatoire conformément aux obligations internationales.

Les pays Membres originaires de l'OCDE sont : l'Allemagne, l'Autriche, la Belgique, le Canada, le Danemark, l'Espagne, les États-Unis, la France, la Grèce, l'Irlande, l'Islande, l'Italie, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni, la Suède, la Suisse et la Turquie. Les pays suivants sont ultérieurement devenus Membres par adhésion aux dates indiquées ci-après : le Japon (28 avril 1964), la Finlande (28 janvier 1969), l'Australie (7 juin 1971), la Nouvelle-Zélande (29 mai 1973), le Mexique (18 mai 1994), la République tchèque (21 décembre 1995), la Hongrie (7 mai 1996), la Pologne (22 novembre 1996) et la République de Corée (12 décembre 1996). La Commission des Communautés européennes participe aux travaux de l'OCDE (article 13 de la Convention de l'OCDE).

INTRODUCTION

National Accounts is published in two separate volumes.

VOLUME I

The **first volume** gives for each country the main aggregates calculated according to either the 1968 System of National Accounts (1968 SNA)¹ or the former² Systems of National Accounts. After a summary of the definitions of these main aggregates, this volume is divided into eight parts.

Part one contains graphs for each country showing the growth in real terms of *Gross domestic product* and *expenditure*.

Part two gives for each zone (OECD-Total, OECD-Europe and EU15) the main aggregates in US dollars using either exchange rates or purchasing power parities.

Part three gives for each country the main aggregates in national currencies.

Parts four and five give for zones and individual countries "growth triangles" for the main components of final expenditure. These triangles are made up of geometric average annual rates of change in per cent between any two years within the period shown.

Part six gives a set of comparative tables based on exchange rates (US dollars, volume and price indices). The national accounts data have been converted into US dollars using market or official exchange rates³. It must be emphasized that these rates do not necessarily reflect the relationships between the internal purchasing powers of currencies and may consequently distort intercountry comparisons of GDP and its components.

Part seven contains a set of comparative tables based on **purchasing power parities**. These tables enable direct comparisons to be made of the volumes of final goods and services produced in the Member countries.

Part eight gives three tables referring to population, exchange rates and purchasing power parities (PPPs) for GDP.

VOLUME II

The second volume gives detailed national accounts for each country. To the extent that data are available, the following tables are shown:

- 1. Main aggregates.
- Private final consumption expenditure by type and purpose (current and constant prices).
- 3. Gross fixed capital formation by kind of activity of owner (current and constant prices).
- Gross fixed capital formation by type of good and owner (current and constant prices).
- 5. Total government outlays by function and type.
- 6. Accounts for general government.
- 6.1 Accounts for central government.
- 6.2 Accounts for state or provincial government.
- 6.3 Accounts for local government.

Les Comptes nationaux sont publiés en deux volumes séparés.

VOLUME I

Le **premier volume** présente pour chaque pays les principaux agrégats de comptabilité nationale évalués conformément soit au Système de Comptabilité Nationale de 1968 (SCN de 1968)¹ soit à l'ancien² Système de Comptabilité Nationale. Après un rappel sommaire des définitions de ces principaux agrégats, ce volume se divise en huit parties.

La **première partie** présente, sous forme de graphiques, l'évolution en termes de volume du *Produit intérieur brut* et de ses *emplois*.

La **deuxième partie** comprend pour chaque zone (OCDE-Total, OCDE-Europe et UE15) les principaux agrégats en dollars des États-Unis en utilisant ou bien les taux de change ou les parités de pouvoir d'achat.

La troisième partie comprend pour chaque pays les données en monnaies nationales des principaux agrégats.

Les **quatrième** et **cinquième parties** présentent pour les zones et les pays individuels des «triangles de croissance» pour les principales composantes de la demande. Ces triangles de croissance sont composés de moyennes géométriques de pourcentages annuels de variation enregistrés entre deux années quelconques de la période montrée.

La sixième partie fournit un ensemble de tableaux comparatifs basés sur les taux de change (dollars, indices de volume et de prix). Les données des comptes nationaux ont été converties en dollars des États-Unis en utilisant le taux de change du marché ou le taux de change officiel³. Il faut souligner que ces taux ne reflètent pas nécessairement les rapports entre les pouvoirs d'achat intérieurs des monnaies et peuvent rendre donc inexacts les comparaisons entre le PIB et ses composantes d'un pays à l'autre.

La **septième partie** comprend un ensemble de tableaux comparatifs basés sur **les parités de pouvoir d'achat**. Ces tableaux permettent des comparaisons directes entre les volumes de biens et services finals produits dans les pays Membres

La **huitième partie** fournit trois tableaux concernant la population, les taux de change et les parités de pouvoir d'achat (PPA) du PIB.

VOLUME II

Le **deuxième volume** présente les statistiques détaillées de chaque pays. Dans la mesure de la disponibilité des données, les tableaux montrés sont les suivants :

- 1. Principaux agrégats.
- Consommation finale privée par catégorie de dépenses et par fonction (prix courants et prix constants).
- 3. Formation brute de capital fixe par genre d'activité du propriétaire (prix courants et prix constants).
- Formation brute de capital selon la nature des biens et par propriétaire (prix courants et prix constants).
- Dépenses des administrations publiques par fonction et par nature.
- 6. Comptes des administrations publiques.
- 6.1 Comptes des administrations centrales.
- 6.2 Comptes des administrations provinciales.
- 6.3 Comptes des administrations locales.

- 6.4 Accounts for social security funds.
- Accounts for non-financial and financial corporate and quasi-corporate enterprises.
- 7.1 Accounts for non-financial corporate and quasi-corporate enterprises.
- 7.2 Accounts for financial institutions.
- Accounts for households and private unincorporated enterprises.
- Accounts for private non-profit institutions serving house-9.
- External transactions, current and capital accumulation 10. accounts.
- 11. Capital finance accounts.
- Gross domestic product by kind of activity (current and 12. constant prices).
- 13. Cost components of value added by kind of activity.
- 14. Profit shares and rates of return on capital.
- 15. Employment by kind of activity.

A table on page 8 of Volume II shows which of these data are available for each country. The explanatory notes to the tables appear at the end of each country section.

Two annexes are included at the end of Volume II. Annex I is a glossary of the technical terms used in the present System of National Accounts (SNA); Annex II gives a full set of English and French translations of the item descriptions in the detailed country tables.

The national accounts in both volumes have been prepared from statistics reported to the OECD by Member countries in their answers to successive National Accounts Questionnaires. These questionnaires are designed to collect internationally comparable data according to either the 1968 SNA or the Former SNA. Although Member countries have all agreed to adopt 1968 SNA a number are still using the earlier system or can give data for only a few years according to the 1968 SNA. The country tables in both volumes indicate the system used by each country. There are numerous differences between the 1968 SNA and the earlier system as regards valuation, classifications and definitions, and these must be taken into account when comparing data compiled according to different systems.

The following signs and abbreviations are used:

Secretariat estimates

not available nil or negligible decimal point billion: thousand million

not elsewhere classified n.e.c. c.i.f. cost, insurance and freight

f.o.b. : free on board

EU15: European Union (15 countries): Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and the United Kingdom.

OECD-Europe: All European Member countries of OECD with the exception of the Czech Republic, Hungary and Poland, i.e. countries in EU15 plus Iceland, Norway, Switzerland and Turkey

OECD-Total: All Member countries of OECD with the exception of the Czech Republic, Hungary, Poland and Korea, i.e. countries of OECD-Europe plus Canada, Mexico, United States, Japan, Australia and New Zealand.

- 1. A System of National Accounts (Series F. No. 2, Rev 3) New York, United Nations, 1968.

 A System of National Accounts and Supporting Tables (Series F,
- No. 2, Rev 2) New York, United Nations, 1964.

 3. The rates used are the monthly average market rates/par or central
- rates shown in International Financial Statistics published by the International Monetary Fund.

- 6.4 Comptes des administrations de sécurité sociale.
- Comptes des sociétés et quasi-sociétés, non financières et financières.
- 7.1 Comptes des sociétés et quasi-sociétés non financières.
- 7.2 Comptes institutions financières.
- 8. Comptes des ménages et des entreprises individuelles.
- Comptes des institutions privées sans but lucratif au services des ménages.
- Transactions extérieures, compte courant et compte 10. d'accumulation de capital.
- 11. Compte de financement de capital par secteur.
- Produit intérieur brut par genre d'activité (prix courants et 12. prix constants).
- Coûts constitutifs de la valeur ajoutée par genre d'acti-13.
- 14. Part des bénéfices et taux de rendement.
- 15. Emploi par genre d'activité.

La disponibilité de ces données est précisée dans le tableau page 8, et les notes explicatives relatives aux tableaux apparaissent à la fin du chapitre du pays.

Deux annexes sont à la fin du volume II. L'annexe I est un glossaire des termes techniques utilisés dans le nouveau Système de Comptabilité Nationale (SCN); l'annexe II comprend les traductions anglaise et française des rubriques des tableaux par pays.

Les deux volumes des comptes nationaux sont préparés à l'aide de l'information statistique fournie à l'OCDE par les pays Membres dans leurs réponses aux Questionnaires des comptes nationaux des dernières années. Ces questionnaires sont destinés à rassembler des données comparables au niveau international et conformes soit au SCN de 1968 ou à l'ancien SCN. Bien que tous les pays Membres aient été d'accord pour adopter le SCN de 1968, un certain nombre utilisent encore le système précédent ou ne peuvent fournir des données que pour quelques années suivant le SCN de 1968. Les pages de couvertures des tableaux par pays dans les deux volumes spécifient le système utilisé par chaque pays. Il existe de nombreuses différences entre le SCN de 1968 et le système précédent en ce qui concernent les évaluations, les classifications et les définitions et il faut en tenir compte lorsqu'on compare des données compilées selon des systèmes différents.

Les signes et abréviations utilisés sont les suivants :

estimations du Secrétariat

non disponible nul ou négligeable point décimal billion mille millions non défini ailleurs n.d.a. : coût, assurance et fret c.a.f.

f.a.b. : franco à bord

UE15 : Union européenne (15 pays) : Autriche, Belgique, Danemark, Finlande, France, Allemagne, Grèce, Irlande, Italie, Luxembourg, Pays-Bas, Portugal, Espagne, Suède et Royaume-Uni.

OCDE-Europe : Ensemble des pays européens Membres de l'OCDE à l'exception de la République tchèque, de la Hongrie et de la Pologne, i.e. les pays de l'UE15 plus Islande, Norvège, Suisse et Turquie.

OCDE-Total : Ensemble des pays Membres de l'OCDE à l'exception de la République tchèque, de la Hongrie, de la Pologne et de la Corée, i.e. les pays de l'OCDE-Europe plus Canada, Mexique, États-Unis, Japon, Australie et Nouvelle-Zélande.

DEFINITION OF MAIN AGGREGATES DÉFINITION DES PRINCIPAUX AGRÉGATS

1. Government Final Consumption Expenditure

The value of goods and services produced by governments for their own use on current account, that is the value of their gross output *less* the sum of the value of their commodity and non-commodity sales and the value of their own-account capital formation. The value of their gross output is equal to the sum of the value of their intermediate consumption of goods and services, compensation of employees, consumption of fixed capital and indirect taxes.

2. Private Final Consumption Expenditure

This is the sum of two items:

- i) The outlays of resident households on new durable and non-durable goods and services less their net sales of second-hand goods, scraps and wastes.
- ii) The value of goods and services produced by private non-profit institutions for own use on current account, that is the value of their gross output reduced by the sum of the value of their commodity and non-commodity sales. The value of their gross output is equal to the sum of the value of their intermediate consumption of goods and services, compensation of employees, consumption of fixed capital and indirect taxes.

3. Increase in stocks

In principle, the market value at the owning establishment of the physical change during a period of account in stocks of materials, supplies, work-in-progress except on construction projects, finished products, livestock raised for slaughter and merchandise held by resident industries, and in stocks of strategic materials and emergency stocks of important products held by government services.

In practice, the closest feasible approximation may be the difference between the levels of these stocks at the beginning and end of the period, both valued at approximate average prices ruling over the period, perhaps valuing commodities processed internally at explicit costs.

1. Consommation finale des administrations publiques

Valeur des biens et services produits par les branches non marchandes des administrations publiques pour leur propre usage courant. La consommation finale des services des administrations publiques est égale à leur production moins la somme de leurs ventes de biens et services marchands, de leurs ventes de biens et services non marchands et de leur formation de capital pour compte propre, lorsque la production d'auto-équipement n'est pas isolée comme branche d'activité marchande. La valeur de la production des branches non marchandes des administrations publiques est égale à la somme de leur consommation intermédiaire de biens et services, augmentée de la rémunération des salariés, de la consommation de capital fixe et des impôts indirects.

2. Consommation finale privée

Ce flux est la somme de:

- i) Achats de services et de biens neufs de consommation durables, semi-durables, et non durables par les ménages résidents diminués de leurs ventes – nettes de leurs achats – de biens d'occasion, de rebuts et de déchets.
- ii) Valeur des biens et services produits par les branches non marchandes des institutions privées sans but lucratif pour leur propre usage courant. La consommation finale de ces institutions est égale à la production de leurs branches non marchandes, moins la somme de leurs ventes de biens et services marchands et de biens et services non marchands. La valeur de la production des branches non marchandes des institutions privées sans but lucratif au service des ménages est égale à la somme de leur consommation intermédiaire de biens et services augmentée de la rémunération des salariés, de la consommation de capital fixe et des impôts indirects.

3. Variation des stocks

En principe, la variation des stocks au cours d'une période comptable est égale à la différence entre les entrées en stocks et les sorties de stocks évaluées au cours du jour, chez le propriétaire. Les stocks comprennent : les stocks de matières premières, de produits semi-ouvrés, de travaux en cours, à l'exclusion des travaux de construction, les stocks de produits finis, le bétail élevé pour la boucherie et les stocks de marchandises importées, détenus par les unités de production résidentes, les stocks de matières stratégiques et les stocks d'urgence, détenus par les producteurs des services rendus par les administrations publiques.

En pratique, la meilleure approximation de la règle d'évaluation théorique peut être de calculer la différence entre les niveaux des stocks à la fin et au début de la période et de l'évaluer aux prix moyens approximatifs de la période, les biens provenant de la production interne de l'entreprise pouvant éventuellement être évalués au prix de revient.

4. Gross Fixed Capital Formation

The outlays (purchases and own-account production) of industries, producers of government services and producers of private non-profit services to households, on additions of new durable goods (commodities) to their stocks of fixed assets less their net sales of similar second-hand and scrapped goods. Excluded are the outlays of government services on durable goods for military use. Included are acquisitions of reproducible and non-reproducible durable goods, except land, mineral deposits, timber tracts and the like, for civilian use; work-inprogress on construction projects; capital repairs; outlays on the improvement of land and on the development and extension of timber tracts, plantations, vineyards, etc. which take considerably more than a year to become productive, until they become productive; the acquisition of breeding stock, draught animals, dairy cattle and the like; and the transfer costs in connexion with purchases and sales of land, mineral deposits, timber tracts, etc.

5. Exports of goods and services

In principle, all transfers of the ownership of goods from residents of a country to non-residents and services provided by resident producers of the country to non-residents. In practice, the exports of goods may consist of the outward movement of merchandise across the customs frontier of a country and of other goods across the boundaries of her domestic territory, including the direct purchases in the country of extraterritorial organisations and non-resident persons. Since the imports of merchandise into a country are to be valued at c.i.f., the exports of services of the country should also include the charges in respect of the imports for the transport and insurance services provided by resident producers of the given country.

6. Imports of goods and services

In principle, all transfers of the ownership of goods from non-residents of a country to residents and services provided by non-resident producers to residents of the country. In practice, the imports of goods may consist of the inward movement of merchandise across the customs frontier of a country and of other goods across the boundaries of her domestic territory, including the direct purchases of the government services and residents of the country abroad. Since imports of merchandise are valued c.i.f., imports also include the charges of resident producers for transport and insurance services in respect of these imports.

7. Gross Domestic Product

The Gross Domestic Product is equal to the total of the gross expenditure on the final uses of the domestic supply of goods and services valued at purchasers' values *less* imports of goods and services valued c.i.f.; or the sum of the compensation of employees, consumption of fixed capital, operating surplus and indirect taxes, net, of resident producers and import duties.

8. Indirect taxes

Taxes assessed on producers in respect of the production, sale, purchase or use of goods and services, which they charge to the expenses of production. Also included are import duties and the operating surplus, reduced by the normal margin of profits of business units, of fiscal and similar monopolies of government.

4. Formation brute de capital fixe

Dépenses (achats et production pour compte propre) des branches d'activité marchande, des branches non marchandes des administrations publiques et des branches non marchandes des institutions privées sans but lucratif, ayant pour but d'ajouter des biens durables neufs à leur capital fixe, diminuées des ventes de ces branches, nettes de leurs achats, de biens analogues d'occasion ou de rebuts. Les dépenses des administrations publiques au titre de biens durables à usage militaire sont exclues de la formation brute de capital fixe. Les acquisitions à usage civil de biens durables, reproductibles ou non, à l'exception des terres, des gisements de minéraux, des zones boisées et des biens analogues, la valeur des travaux du bâtiment et des travaux publics et la valeur du gros entretien effectué sont incluses dans la formation brute de capital fixe. De même, on inclura dans la formation brute de capital fixe les dépenses de mise en valeur et d'amélioration des terres et les dépenses engagées pour développer et étendre les zones boisées, les plantations, les vignobles, etc., jusqu'à ce qu'ils deviennent productifs, lorsque le délai qui les sépare de l'entrée en production est largement supérieur à un an, et les acquisitions d'animaux pour la reproduction, d'animaux de trait, de bétail laitier, etc., ainsi que les frais de mutation relatifs aux achats et aux ventes de terrains, de gisements minéraux, de zones boisées, etc.

5. Exportations de biens et services

En principe, on enregistre dans les exportations d'un pays tous les transferts de propriété des biens et des services fournis par les producteurs résidents de ce pays à des non-résidents. En pratique on peut saisir les exportations de biens de la manière suivante : au passage des frontières douanières, s'il s'agit de marchandises, à la sortie du territoire économique s'il s'agit d'autres biens, en y incluant les achats directs à l'intérieur des organismes extra-territoriaux et des particuliers non résidents. Étant donné que les importations d'un pays doivent être évaluées c.a.f., les exportations de services de ce pays doivent inclure la valeur des services de transport et d'assurance des marchandises importées fournis par des producteurs résidents.

6. Importations de biens et services

En principe, on enregistre dans les importations d'un pays tous les transferts de propriété des biens et des services fournis par les producteurs non résidents à des résidents de ce pays. En pratique on peut saisir les importations de la manière suivante: au passage des frontières du pays s'il s'agit de marchandises, à l'entrée du territoire économique s'il s'agit des autres biens et services; ces derniers comprennent les achats directs courants à l'extérieur des administrations publiques et des particuliers résidents. Comme les importations de marchandises d'un pays sont évaluées c.a.f., leur valeur inclut la valeur des services de transports et d'assurance fournis par les producteurs résidents sur les marchandises importées.

7. Produit intérieur brut

Le produit intérieur brut est égal au total des emplois finals de biens et services aux prix d'acquisition diminué des importations c.a.f. On peut encore définir le produit intérieur brut comme la somme de la rémunération des salariés, de la consommation de capital fixe, de l'excédent net d'exploitation, des impôts indirects – nets des subventions d'exploitation – des producteurs résidents et des droits et taxes sur importations.

8. Impôts indirects

Impôts payés par les producteurs, figurant dans leur coût de production et assis sur la production, la vente, l'achat ou l'utilisation de biens ou de services. Ces impôts comprennent les droits et taxes sur importations ainsi que les excédents d'exploitation des monopoles fiscaux et autres monopoles publics diminués de la marge bénéficiaire normale.

9. Subsidies

All grants on current account made by government to private industries and public corporations; and grants made by the public authorities to government enterprises in compensation for operating losses when these losses are clearly the consequence of the policy of the government to maintain prices at a level below costs of production.

10. Consumption of fixed capital

The value, at current replacement cost, of the reproducible fixed assets except the roads, dams and other forms of construction other than structures of the producers of government services used up during a period of account as a result of normal wear and tear, foreseen obsolescence and the normal rate of accidental damage. Unforeseen obsolescence, main catastrophies and the depletion of natural resources are not taken into account.

11. Compensation of employees paid by resident producers

All payments by resident producers of wages and salaries to their employees, in kind and in cash, and of contributions, paid or imputed, in respect of their employees to social security schemes and to private pension, family allowance, casualty insurance, life insurance and similar schemes.

12. Operating surplus

Gross output at producers' values *less* the sum of intermediate consumption, compensation of employees, consumption of fixed capital and indirect taxes reduced by subsidies. It includes the earnings of self-employed persons.

13. Net saving

The difference between current receipts and current disbursements of the nation. It is derived by deducting government and private final consumption from National Disposable Income.

14. Surplus of the nation on current transactions

The excess of receipts on current account over disbursements on current account in respect of the transactions of a country with the rest of the world. It is equal to exports *less* imports of goods and services, *plus* net factor income and net current transfers from the rest of the world.

15. Net factor income from the rest of the world

Receipts (*less* payments) of compensation of employees and entrepreneurial and property income from the rest of the world.

16. Net current transfers from the rest of the world

Net transfers of income between residents and the rest of the world. The transfers are made from the current income of the payer and add to the current income of the recipient for such purposes as consumption expenditure. They may include transfers in cash or in kind between governments, migrants' remittances, transfers of immigrants personal and household goods, and transfers in cash and in kind between resident and non-resident households.

9. Subventions d'exploitation

Tous les transferts courants de l'administration aux unités de production marchande du secteur privé et aux sociétés publiques et les transferts des pouvoirs publics aux unités de production marchandes gérées par l'administration pour compenser leurs pertes d'exploitation lorsque celles-ci sont manifestement la conséquence de la politique des pouvoirs publics visant à maintenir des prix à un niveau inférieur aux coûts de production.

10. Consommation de capital fixe

Valeur, aux prix courants de remplacement, du capital fixe reproductible consommé au cours de la période, du fait de l'usure normale, de l'obsolescence prévisible et des dommages accidentels probables. On ne calcule pas de consommation de capital fixe pour les routes, les barrages, et les constructions autres que les bâtiments des producteurs de services rendus par les administrations publiques. L'obsolescence imprévisible, les grands catastrophes, l'épuisement des ressources naturelles ne sont pas pris en compte dans le calcul de la consommation de capital fixe.

11. Rémunération des salariés payée par les producteurs résidents

Paiements en espèces et en nature des producteurs résidents à leur personnel de salaries et de traitements ainsi que leurs contributions effectives ou imputées aux régimes de sécurité sociale et aux régimes privés de retraite, d'allocations familiales, d'assurance-dommages, d'assurance-vie, etc.. pour le compte de leur personnel.

12. Excédent net d'exploitation

Différence entre la production aux prix départ-usine et la somme de la consommation intermédiaire, de la rémunération des salariés, de la consommation de capital fixe et des impôts indirects diminués des subventions d'exploitation. Il comprend le revenu des entreprises individuelles.

13. Épargne nette

Différence entre les ressources courantes et les emplois courants de la nation. Elle est obtenue comme la différence entre le Revenu national disponible et la consommation finale privée et celle des administrations publiques.

14. Solde des opérations courantes avec le reste du monde

Excédent du compte des opérations courantes d'un pays avec le reste du monde. Il est égal aux exportations (*moins* importations) de biens et services, *plus* le revenu net des facteurs reçu du reste du monde et les transferts courants nets reçus du reste du monde.

15. Revenu net des facteurs reçu du reste du monde

La rémunération des salariés et le revenu de la propriété et de l'entreprise reçus du reste du monde *moins* les paiements au reste du monde.

16. Transferts courants nets reçus du reste du monde

Transferts nets de revenus entre les résidents et le reste du monde. Ils s'opèrent par prélèvement sur le revenu courant du payeur et s'ajoutent au revenu courant du bénéficiaire pour financer ses dépenses courantes, en particulier ses dépenses de consommation. Il peut s'agir de transferts en espèce ou en nature entre des gouvernements, des envois de fonds des émigrés, des transferts de biens personnels et ménagers des émigrants, et des transferts en espèce ou en nature entre ménages résidents et non-résidents.

PART ONE PREMIÈRE PARTIE

Graphs Graphiques

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

This part contains graphs for each country and groups of countries showing the growth from 1960 to 1997 in reals terms of Gross Domestic Product, consumption expenditure, and fixed capital formation.

Cette partie présente, sous forme de graphiques, l'évolution de 1960 à 1997 en termes de volume du Produit Intérieur Brut, de la consommation finale, et de la formation brute de capital fixe.

1990 = 100 (Semi-logarithmic scale)

1990 = 100 (Semi-logarithmic scale)

1990 = 100 (Semi-logarithmic scale)

1990 = 100 (Semi-logarithmic scale)

1990 = 100 (Semi-logarithmic scale)

1990 = 100 (Semi-logarithmic scale)

DEUXIÈME PARTIE

Main aggregates: Zones Principaux agrégats : Zones

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

This part presents for each zone (OECD-Total, OECD-Europe and EU15), in US dollars, the following tables:

- Expenditure on the gross domestic product, at current and constant prices.
- Cost components of G.D.P.
- Capital transactions of the nation.
- Relations among national accounting aggregates.
- a) The first three tables, referring to OECD-Total, OECD-Europe and EU15 are based on exchange rates. The data for the individual countries in each group have been converted into US dollars using 1990 exchange rates. The use of constant exchange rates throughout ensures that year to year movements depend only on movements in the current price data for the countries concerned, and are not affected by fluctuations in exchange rates from one year to the next.
- b) The last three tables, referring also to OECD-Total, OECD-Europe and EU15 are based on *Purchasing Power parities*. The data for the individual countries in each group have been converted into US dollars using the general GDP PPPs and not the PPPs specific to each aggregate. 1990 PPPs are used to calculate constant dollars series.

Data for Korea, Czech Republic, Hungary and Poland have not been included in area total.

Cette partie fournit pour chaque zone (OCDE-Total, OCDE-Europe et UE15), en dollars des É-U les tableaux suivants :

- Produit intérieur brut et ses emplois aux prix courants et aux prix constants.
- Répartition du P.I.B.
- Opérations en capital de la nation.
- Relations entre les principaux agrégats de la Comptabilité nationale.
- a) Les trois premiers tableaux concernant l'OCDE-Total, l'OCDE-Europe et l'UE15 sont basés sur les *taux de change*. Les données des pays composant chaque groupe de pays ont été convertis en dollars É-U en utilisant les taux de change de 1990. L'utilisation de taux de change constant sur toute la période assure le fait que les variations d'une année à l'autre dépendent uniquement des mouvements des données à prix courants des pays concernés et ne sont pas affectées par les fluctuations des taux de change d'une année à l'autre.
- b) Les trois derniers tableaux concernant l'OCDE-Total, l'OCDE-Europe et l'UE15 sont basés sur *les parités de pouvoir d'achat.* Les données des pays composant chaque zone ont été converties en dollars É-U en utilisant la PPA du PIB et non les PPA spécifiques de chaque agrégat. Les PPA de 1990 ont été utilisées pour calculer les séries en dollars constants.

Les données de la Corée, de la République tchèque, de la Hongrie et de la Pologne n'ont pas été intégrées aux totaux par zones.

Main aggregates: Countries Principaux agrégats: Pays

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

This part presents for each country, in national currency, the following tables:

- Expenditure on the gross domestic product, at current and constant prices.
- Cost components of G.D.P.
- Capital transactions of the nation.
- Relations among national accounting aggregates.

To facilitate inter-country comparisons the constant price data are shown at the price levels of 1990. For countries that do not use 1990 as the base year calculating their constant price series, the constant price data for each aggregate have been scaled up by the ratio in 1990 of the current value of that aggregate to its value at the prices of the base year used by the country concerned. This scaling procedure in no way alters the fact that the constant price series concerned still reflect the *relative* prices of the years actually used. The base years used are given in the tables when they differ from 1990.

Cette partie fournit pour chaque pays, en monnaie nationale, les tableaux suivants :

- Produit intérieur brut et ses emplois aux prix courants et aux prix constants.
- Répartition du P.I.B.
- Opérations en capital de la nation.
- Relations entre les principaux agrégats de la Comptabilité nationale.

Pour faciliter les comparaisons entre pays, les séries à prix constants sont montrées, aux niveaux de prix de 1990. Pour les pays n'utilisant pas 1990 comme année de base de leurs séries à prix constants, les données à prix constants de chaque agrégat ont été multipliées par le rapport en 1990 de la valeur courante de cet agrégat à sa valeur aux prix de l'année de base utilisée par le pays concerné. Cette procédure ne modifie pas le fait que les séries ainsi rebasées aux prix de 1990 reflètent toujours les prix *relatifs* de l'année de base réellement utilisée. Les années de base utilisées sont précisées dans les tableaux lorsqu'elles diffèrent de 1990.

In the National Accounts published by the Service Central de la Statistique et des Études Économiques of Luxembourg imputed bank services provided to non-residents are not deducted in calculating GDP. For this reason, estimates of GDP published by the Luxembourg authorities are somewhat higher than those shown here, particularly for recent years.
 At 1985 relative prices for 1970-1997 and at 1975 relative prices for 1960-1969.

Dans les Comptes Nationaux publiés par le Service Central de la Statistique et des Études Économiques du Luxembourg les services bancaires imputés fournis aux non-résidents ne sont pas déduits du PIB. Pour cette raison, le PIB publié par les autorités Luxembourgeoises est sensiblement plus élevé que celui montré ici, surtout pour les années récentes.
 Aux prix relatifs de 1985 pour la période 1970-1997 et aux prix relatifs de 1975 pour la période 1960-1969.

^{1.} Aux prix relatifs de 1990.

Growth triangles: Zones Triangles de croissance : Zones

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

This part presents for each zone growth triangles for the following aggregates:

- Per capita GDP (volume).
- Per capita private consumption (volume).
- GDP (volume and implicit price deflator).
- Private final consumption expenditure (volume and implicit price deflator).
- Government final consumption expenditure (volume and implicit price deflator).
- Gross fixed capital formation (volume and implicit price deflator).
- National disposable income (value).
- Compensation of employees (value).

Two sets of zones are presented: the first is based on exchange rates and the second on PPPs.

The price indices for zones based on exchange rates (or PPPs) are harmonic weighted averages of the component indices using as weights the current value of the aggregate expressed in US dollars at 1990 exchange rates (or 1990 PPPs).

Data for Korea, Czech Republic, Hungary and Poland have not been included in area total.

Cette partie fournit pour chaque zone des triangles de croissance pour les agrégats suivants :

- PIB par habitant (volume).
- Consommation finale privée par habitant (volume).
- PIB (volume et prix implicite).
- Consommation finale privée (volume et prix implicite).
- Consommation des administrations publiques (volume et prix implicite).
- Formation brute de capital fixe (volume et prix implicite).
- Revenu national disponible (valeur).
- Rémunération des salariés (valeur).

Deux ensembles de zones sont montrés : le premier basé sur les taux de change et l'autre sur les PPA.

Les indices de prix des zones basées sur les taux de change (ou les PPA) sont obtenus comme moyennes harmoniques des indices par pays pondérés par la valeur courante de l'agrégat exprimée en dollars É-U au taux de change de 1990 (ou PPA de 1990).

Les données de la Corée, de la République tchèque, de la Hongrie et de la Pologne n'ont pas été intégrées aux totaux par zones.

^{1.} Ces triangles de croissance sont calculés à partir de données basées sur les parités de pouvoir d'achat.

Growth triangles: Countries Triangles de croissance : Pays

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

This part presents for each country growth triangles for the following aggregates:

- Per capita GDP (volume).
- Per capita private consumption (volume).
- GDP (volume and implicit price deflator).
- Private final consumption expenditure (volume and implicit price deflator).
- Government final consumption expenditure (volume and implicit price deflator).
- Gross fixed capital formation (volume and implicit price deflator).
- National disposable income (value).
- Compensation of employees (value).

Cette partie fournit pour chaque pays des triangles de croissance pour les agrégats suivants :

- PIB par habitant (volume).
- Consommation finale privée par habitant (volume).
- PIB (volume et prix implicite).
- Consommation finale privée (volume et prix implicite).
- Consommation des administrations publiques (volume et prix implicite).
- Formation brute de capital fixe (volume et prix implicite).
- Revenu national disponible (valeur).
- Rémunération des salariés (valeur).

SIXIÈME PARTIE

Comparative tables based on exchange rates Tableaux comparatifs basés sur les taux de change

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut für Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut für Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

CALCULATION PROCEDURES

The following points should be borne in mind in using the tables in Part VI of this volume.

- a) The various aggregates shown in tables 1 to 18 have been calculated by three different methods: at current prices and 1990 exchange rates (Tables 1-6); at 1990 prices and 1990 exchange rates (Tables 7-12); and at current prices and current exchange rates (Tables 13-18). By using 1990 exchange rates throughout, the year to year movements in the data for a given country or group of countries shown in Tables 1-6 are determined entirely by movements in the national data at current prices. Year to year movements in the data in Tables 13 to 18, however, are liable to be strongly influenced by fluctuations in exchange rates as well as by movements in the national data at current prices. The data in Tables 13 to 18 are, therefore, only suitable for comparisons between countries within a single year, and not for comparisons between years for the same country, or group of countries.
- b) In the tables giving *volume and price indices* all series are shown with 1990 = 100. In practice many countries use a year before 1990 as their base year for calculating volume and price indices, and the indices shown for these countries (and for groups of countries) are therefore based on the relative prices or quantities of years prior to 1990. The base years used by Member countries are indicated in the country tables where they differ from 1990.
- c) the volume indices for *groups of countries* are arithmetic, weighted averages of the component indices using as weights the 1990 value of the aggregate concerned (GDP, private final consumption expenditure, etc.) expressed in US dollars at 1990 exchange rates. The price indices for *groups of countries* are harmonic weighted averages of the component indices using as weights the current value of the aggregate concerned, expressed in US dollars at 1990 exchange rates. It should be noted that the product of these two weighted volume and price indices for groups of countries does not correspond with the aggregates shown at current prices and exchange rates, but correspond with the aggregates shown at current prices and 1990 exchange rates.

Data for Korea, Czech Republic, Hungary and Poland have not been included in area total. Data for Australia are based on calendar year.

MÉTHODES DE CALCUL

Il est nécessaire de souligner les points suivants pour l'utilisation des tableaux de cette sixième partie.

a) les différents agrégats montrés dans les tableaux 1 à 18 ont été calculés de trois façons differentes: aux prix courants et taux de change de 1990 (tableaux 1-6), aux prix de 1990 et taux de change de 1990 (tableaux 7-12) et aux prix courants et taux de change courants (tableaux 13-18). En utilisant les taux de change de 1990 sur toute la période, les variations d'une année sur l'autre, pour un pays ou groupe de pays, des series montrées dans les tableaux 1-6 sont déterminées exclusivement par les mouvements des données nationales à prix courants. Par contre les variations calculées à partir des données des tableaux 13-18 sont susceptibles d'être aussi largement influencées par les fluctuations des taux de change que par les mouvements des données nationales à prix courants. Ainsi les données des tableaux 13-18 doivent être utilisées uniquement pour des comparaisons entre pays pour une année particulière, et non pour des comparaisons dans le temps pour le même pays ou groupe de pays.

- b) Les tableaux d'indices de volume et de prix sont montrés avec 1990 = 100. En réalité beaucoup de pays utilisent une année antérieure à 1990 comme année de base pour calculer leurs indices de volume et de prix; et donc les indices montrés pour ces pays (et groupe de pays) sont basés sur des quantités et prix relatifs différents de 1990. Les années de base utilisées par les pays membres sont précisées dans les tableaux quand elles diffèrent de 1990.
- c) Les indices de volume concernant les *groupes de pays* sont obtenus comme moyennes arithmétiques des indices par pays pondérés par la valeur en 1990 de l'agrégat concerné (PIB, Consommation finale privée, etc.), exprimée en dollars É-U aux taux de change de 1990. Les indices de prix concernant les *groupes de pays* sont obtenus comme moyennes harmoniques des indices par pays pondérés par la valeur courante de l'agrégat concerné exprimée en dollars É-U aux taux de change de 1990. Il faut noter que le produit de ces deux indices pondérés de volume et de prix ne correspond pas aux agrégats montrés aux prix courants et taux de change courants, mais correspond aux agrégats montrés aux prix courants et taux de change de 1990.

Les données de la Corée, de la République tchèque, de la Hongrie et de la Pologne n'ont pas été intégrées aux totaux par zones. Les données de l'Australie sont établies sur une base calendaire.

 Non compris la République tchèque la Hongrie et la Pologne.

Comparative tables based on PPPs Tableaux comparatifs basés sur les PPA

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut fur Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut fur Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

CALCULATION PROCEDURES

The data in this section have been converted to United States dollars using purchasing power parities (PPPs) for GDP rather than the exchange rates used in earlier parts of this volume. PPPs are the rates of currency conversion that equalise the purchasing power of different countries by eliminating differences in price levels between countries. When converted by means of PPPs, the expenditures on GDP for different countries are in effect expressed at the same set of prices so that comparisons between countries reflect only differences in the volume of goods and services purchased.

The PPP converted data and the exchange rate converted data in the tables are shown in US dollars, but the choice of currency unit in both cases is purely a matter of convention which has no effect on comparisons between countries.

1990, 1993, 1996: PPPs for all OECD countries except those listed below are triennial benchmark results calculated jointly by the OECD and the Statistical Office of the European Communities (Eurostat). For Mexico, Korea, Czech Republic, Hungary and Poland, the PPPs for 1990 and 1993 are OECD estimates. for Korea the PPPs for 1996 are also OECD estimates.

1970 to 1989: The 1990 PPPs were backdated to 1970 using each country's rate of inflation relative to that of the United States. Specifically, country k's PPP for year t was obtained by multiplying its 1990 PPP by Ikt divided by lust where Ik is the GDP price index based on 1990 for country k and lus is the GDP price index based on 1990 for the United States. As changes in PPPs depend directly on relative rates of inflation in different countries, this method produces robust estimates for years other than the base year provided they are not too remote from the base morning.

1991, 1992, 1994 and 1995: Since 1991, Eurostat has calculated annual PPPs for EU Member States and a number of other European OECD countries. In 1991, Eurostat calculated PPPs for the twelve EU Member States plus Austria, Sweden and Switzerland; in 1992, Eurostat calculated PPPs for the same 15 countries plus Finland; and in 1994 and 1995, Eurostat calculated PPPs for the 15 EU Member States plus Iceland, Norway, Poland and Switzerland. PPPs for the countries not covered by Eurostat are OECD estimates.

1997: PPPs for all countries are OECD estimates.

The time series of real values for private final consumption expenditure, government final consumption expenditure and gross fixed capital formation have been derived using the general GDP PPPs and not the PPPs specific to these aggregates.

Data for Korea, Czech Republic, Hungary and Poland have not been included in area total. Data for Australia are based on calendar year.

MÉTHODES DE CALCUL

Les données de la présente section ont été converties en dollars des États-Unis au moyen des parités de pouvoir d'achat (PPA) pour le PIB et non des taux de change comme dans les précédentes parties du présent volume. Les PPA sont les taux de conversion monétaire qui permettent d'exprimer dans une unité commune les pouvoirs d'achat des différentes monnaies en éliminant les différences de niveaux de prix existant entre les pays. Les dépenses imputées au PIB, pour les différents pays, converties en utilisant les PPA sont en effet exprimées en fonction d'une même structure de prix internationaux si bien que les écarts entre pays reflètent uniquement les différences de volume de biens et services achetés.

Les données converties au moyen des PPA et celles converties en utilisant les taux de change sont exprimées en dollars É-U mais, dans les deux cas, le choix de l'unité monétaire est une convention qui n'affecte en aucune façon les comparaisons entre pays.

1990, 1993, 1996 : les PPA pour tous les pays de l'OCDE, à l'exception de ceux énumérés ci-dessous, sont les résultats, pour ces années de référence des calculs triennaux effectués par l'Office Statistique des Communautés Européennes (Eurostat). Pour le Mexique, la Corée, la République tchèque, la Hongrie et la Pologne, les PPA pour 1990 et 1993 sont des estimations de l'OCDE; les PPA de 1996 pour la Corée sont aussi des estimations de l'OCDE.

1970-1989: les PPA de 1990 du PIB ont été extrapolées jusqu'en 1970 en utilisant les taux d'inflation de chaque pays rapportés à celui des États-Unis. Plus précisément la PPA du pays k pour l'année t a été obtenue en multipliant sa PPA de 1990 par le rapport lkt/ lust où lk est l'indice de prix du PIB du pays k sur la base 1990 et lus l'indice de prix du PIB des États-Unis sur la base 1990. Les variations des PPA dépendant directement des taux d'inflation relatifs des différents pays, cette méthode permet d'obtenir des estimations fiables pour les années autres que lannée de base à condition quelles ne soient pas trop éloignées de cette année de base.

1991, 1992, 1994 et 1995 : Depuis 1991, Eurostat calcule des parités annuelles pour les États Membres de l'UE et pour plusieurs autres pays européens. En 1991, Eurostat a calculé des données annuelles pour les 12 États Membres des communautés, plus l'Autriche, la Suède et la Suisse; en 1992, la Finlande a été associée à ces calculs; en 1994 et 1995, Eurostat a calculé des PPA pour les 15 pays de l'UE plus l'Islande, la Norvège, la Pologne et la Suisse. Les PPA pour les pays non couverts par Eurostat sont des estimations de l'OCDE.

1997: Les PPA pour tous les pays sont des estimations de l'OCDE.

Les séries chronologiques de valeurs réelles pour la consommation finale privée, la consommation finale des administrations publiques et la formation brute de capital fixe ont été calculées en utilisant la PPA du PIB et non leurs PPA respectives.

Les données de la Corée, de la République tchèque, de la Hongrie et de la Pologne n'ont pas été intégrées aux totaux par zones. Les données de l'Australie sont établies sur une base calendaire.

 Non compris la République tchèque, la Hongrie et la Pologne.

Appendix Annexe

The statistics for Germany in this publication refer to Germany after unification. Official data for Germany after unification are available only from 1991 onwards. In this publication, the secretariat has estimated some national accounts aggregates for the whole of Germany back to 1960 in order to calculate the various zones totals. These estimates are based on statistics published by Deutsches Institut fur Wirtschaftsforschung for period 1989-90 and by the East German Statistical Office in 1990 for period 1980-89. They are also based on the ratios of the aggregates of West Germany and the whole of Germany.

Les statistiques concernant l'Allemagne dans cette publication se réfèrent à l'Allemagne après l'unification. Des données officielles pour l'Allemagne après l'unification ne sont disponibles qu'à partir de 1991. Dans cette publication, le secrétariat a estimé certains agrégats des comptes nationaux pour l'Allemagne dans son ensemble depuis 1960 afin de calculer les différentes zones. Ces estimations sont basées sur des statistiques publiées par Deutsches Institut fur Wirtschaftsforschung pour la période 1989-90 et par l'Office Statistique de l'Allemagne de l'Est en 1990 pour la période 1980-89. Elles sont aussi basées sur les rapports des agrégats de l'Allemagne occidentale et de l'Allemagne dans son ensemble.

POPULATION

Population is defined as all nationals present in or temporarely absent from the country and aliens permanently settled in the country. For further details see Labour force statistics, OECD. Data for Korea, Czech Republic, Hungary and Poland have not been included in area total. Data for Germany refer to Germany after unification.

EXCHANGE RATES

The exchange rates have been calculated by the International Monetary Fund, and are published in International Financial Statistics. They are par or market rates averaged over the year. The exchange rates shown for Germany refer to the Deutsche Mark.

PURCHASING POWER PARITIES FOR GDP

PPPs are the rates of currency conversion that equalise the purchasing power of different countries by eliminating differences in price levels between countries. When converted by means of PPPs, the expenditures on GDP for different countries are in effect expressed at the same set of prices so that comparisons between countries reflect only differences in the volume of goods and services purchased.

1990, 1993, 1996: PPPs for all OECD countries except those listed below are triennial benchmark results calculated jointly by the OECD and the Statistical Office of the European Communities (Eurostat). For Mexico, Korea, Czech Republic, Hungary and Poland, the PPPs for 1990 and 1993 are OECD estimates. for Korea the PPPs for 1996 are also OECD estimates.

1970 to 1989: The 1990 PPPs were backdated to 1970 using each country's rate of inflation relative to that of the United States. Specifically, country k's PPP for year t was obtained by multiplying its 1990 PPP by lkt divided by lust where lk is the GDP price index based on 1990 for country k and lus is the GDP price index based on 1990 for the United States. As changes in PPPs depend directly on relative rates of inflation in different countries, this method produces robust estimates for years other than the base year provided they are not too remote from the base morning.

1991, 1992, 1994 and 1995: Since 1991, Eurostat has calculated annual PPPs for EU Member States and a number of other European OECD countries. In 1991, Eurostat calculated PPPs for the twelve EU Member States plus Austria, Sweden and Switzerland; in 1992, Eurostat calculated PPPs for the same 15 countries plus Finland; and in 1994 and 1995, Eurostat calculated PPPs for the 15 EU Member States plus Iceland, Norway, Poland and Switzerland. PPPs for the countries not covered by Eurostat are OECD estimates.

1997: PPPs for all countries are OECD estimates.

POPULATION

La population est définie comme l'ensemble des nationaux présents ou temporairement absents du pays et des étrangers établis en permanence dans le pays. Pour plus de détails, se reporter aux Statistiques de la population active, OCDE. Les données de la Corée, de la République tchèque, de la Hongrie et de la Pologne n'ont pas été intégrées aux totaux par zones. Les données de l'Allemagne se réfèrent à l'Allemagne après l'unification.

TAUX DE CHANGE

Les taux de change sont calculés par le Fonds Monétaire International et publiés dans International Financial Statistics. Ce taux est une moyenne sur l'année du taux du marché/parité ou taux central. Le taux de change montré pour l'Allemagne se réfère au Deutsche Mark

PARITÉS DE POUVOIR D'ACHAT DU PIB

Les PPA sont les taux de conversion monétaire qui permettent d'exprimer dans une unité commune les pouvoirs d'achat des différentes monnaies en éliminant les différences de niveaux de prix existant entre les pays. Les dépenses imputées au PIB, pour les différents pays, converties en utilisant les PPA sont en effet exprimées en fonction d'une même structure de prix internationaux si bien que les écarts entre pays reflètent uniquement les différences de volume de biens et services achetés.

1990, 1993, 1996 : les PPA pour tous les pays de l'OCDE, à l'exception de ceux énumérés ci-dessous, sont les résultats, pour ces années de référence des calculs triennaux effectués par l'Office Statistique des Communautés Européennes (Eurostat). Pour le Mexique, la Corée, la République tchèque, la Hongrie et la Pologne, les PPA pour 1990 et 1993 sont des estimations de l'OCDE. les PPA de 1996 pour la Corée sont aussi des estimations de l'OCDE.

1970-1989: les PPA de 1990 du PIB ont été extrapolées jusqu'en 1970 en utilisant les taux d'inflation de chaque pays rapportés à celui des États-Unis. Plus précisément la PPA du pays k pour l'année t a été obtenue en multipliant sa PPA de 1990 par le rapport lkt/ lust où lk est l'indice de prix du PIB du pays k sur la base 1990 et lus l'indice de prix du PIB des États-Unis sur la base 1990. Les variations des PPA dépendant directement des taux d'inflation relatifs des différents pays, cette méthode permet dobtenir des estimations fiables pour les années autres que lannée de base à condition quelles ne soient pas trop éloignées de cette année de base.

1991, 1992, 1994 et 1995 : Depuis 1991, Eurostat calcule des parités annuelles pour les États Membres de l'UE et pour plusieurs autres pays européens. En 1991, Eurostat a calculé des données annuelles pour les 12 États Membres des communautés, plus l'Autriche, la Suède et la Suisse; en 1992, la Finlande a été associée à ces calculs; en 1994 et 1995, Eurostat a calculé des PPA pour les 15 pays de l'UE plus l'Islande, la Norvège, la Pologne et la Suisse. Les PPA pour les pays non couverts par Eurostat sont des estimations de l'OCDE.

1997: Les PPA pour tous les pays sont des estimations de l'OCDE.
